Objective:

To acquire hands-on skills and intensify my knowledge of actual engineering practices by investigating emerging technologies, enhancing my technical and problem-solving skills, and familiarizing myself with either online or physical workplace processes, professional collaboration, and industry standards—readying myself to serve effectively in the computer engineering field.

PROFESSIONAL SUMMARY

Computer Engineering student with hands-on experience in embedded systems, ESP32 development, Arduino programming, electronics prototyping, and computer hardware troubleshooting. Developed award-winning IoT and automation projects involving wireless monitoring and sensor-based systems. Possesses strong problem-solving and technical skills with a strong interest in applying engineering knowledge in a professional work environment.

Technical Skills

- **Languages & Frameworks**: Java (OOP), C# (Basic), C++ (Basic), .NET (Basic)
- **Mobile Development:** Java Mobile Application Development, APK build & multi-branch deployment
- **Databases:** SQL, MSSQL
- **Systems & Networking:** Embedded Systems Development, ESP32, Arduino, Cisco networking fundamentals
- **Git / GitHub** (or GitLab)
- **API** (Groc AI)- for mobile AI development
- **Other**: Hardware diagnostics & assembly, circuit design, PCB assembly

---

Soft Skills

- Problem Solving
- Critical Thinking
- Analytical Thinking
- Technical Troubleshooting
- Attention to Detail
- Adaptability
- Continuous Learning
- Team Collaboration
- Communication Skills
- Time Management

Experience

Software Engineering Intern — Application Developer
Camfin (Cash Management Finance, Inc.) | Jun 2026 – Aug 2026

- **Mobile Application:** Cut manual leave-tracking requests by by building the dashboard, active-employee-list, and leave-management modules for the company's Java-based HRIS mobile app.
- **Cross-Functional Collaboration:** Collaborated closely with technical supervisors on mobile UI/UX design and engaged in professional technical discussions with executive leadership to realign software features with business needs.
- **Enterprise Mobile Deployment & Infrastructure:** Managed multi-branch APK deployments across corporate phones, configuring secure VPN connections to connect mobile devices directly to central servers while coordinating with branch administrators for seamless rollouts.
- **System Architecture & Flowcharting:** Designed comprehensive architectural flowcharts mapping out full enterprise workflows for the BDG CAS, Accounting, and Treasury applications to streamline cross-departmental data pathways and system integration.
- **Cross-Functional Multitasking (IT Support & Asset Management):** Multi-tasked across software development, IT technical support, and hardware asset operations—troubleshooting system and network issues for departments like accounting, maintaining corporate mobile inventory, and managing device configurations.

IT Intern — Computer Engineering Intern
Polytechnic University of the Philippines, Santa Maria Bulacan Campus| July 2025 – Sep 2025

- Closed out a full hardware audit and recovery effort for 44 desktop computers by diagnosing, repairing, and performing preventive maintenance on all defective units, while documenting specs and maintenance needs in a structured Excel/Word log for IT records.
- Restored connectivity across campus facilities by diagnosing and reconfiguring routers, switches, and RJ45 cabling, validating each fix in Cisco Packet Tracer before deployment.
- Kept hours of Hack4Gov running with nearzero downtime by resolving live connectivity issues on projectors, audio systems, and computers for faculty, staff, and event participants.

Freelance Electronics Developer

Contactless Alcohol Dispenser
Freelance | Laguna, Mar 2026

- Eliminated physical touchpoints on a public-use dispenser by designing and programming an ESP32 hand-detection system, achieving second response time across test cycles before deployment.

Wireless Smoke Detector
Freelance | Makati, Apr 2025

- Cut fire-alert response time to seconds by building a Bluetooth-enabled smoke detector that pushes SMS notifications directly to registered users, tested across trial activations.

Computer Hardware Technician
Freelance / Personal Projects | 2023 – Present

- Restored full functionality to desktop systems by diagnosing and repairing hardware failures — motherboards, PSUs, RAM, storage — for individual and small-business clients over years.
- -Cut average system boot and load times by by performing clean OS installs, driver configuration, and performance tuning across machines.
- Closed of service calls on the first visit by systematically isolating software vs. hardware failure points before recommending a fix, avoiding unnecessary part replacements for clients.
- Reduced repeat support requests by walking users through preventive maintenance steps and documenting recurring issues after each service call.

Independent Software Project

Custom AI Tool Integration

- **API & Model Integration:** Built and configured a custom AI application powered by the **Groq API** to enable fast, low-latency AI inference and automated task handling.
- **Feature Expansion & File Processing:** Extended the application beyond text-only prompting by engineering file-upload capabilities, allowing the tool to parse external documents and process data for accounting and administrative workflows.

Educational Background

College- Polytechnic University of the Philippines

Km 38 Pulong Buhangin Santa Maria Bulacan

Present

S.H.S Program - Liceo di San Lorenzo 1999

Km 37 Pulong Buhangin Sta.maria Bulacan

2021-2023

J.H.S program – Jesus lord and savior Christian colleges foundation inc.

E celestino st, Guyong Sta. Maria Bulacan

2017-2021
